

## The RØDE® Podcaster

---

The world's first USB dynamic microphone specifically suited to Podcasting.

Using the bench mark of our award winning RØDE Broadcaster, a microphone which is in use 'ON-AIR' at national radio stations around the world, the Podcaster is a fully professional, dynamic microphone with specifications and features specifically suited to voice.

Seamless integration was the idea, and it was obtained by creating a studio dynamic microphone with unparalleled A/D converters, so that the microphone can be plugged into any computer with no in/out boxes, no expensive computer pre-amps, just a USB cable.

The Podcaster offers an end-address configuration, the clarity of RØDE's tailored-for-voice frequency response, an 'ON' L.E.D, a direct headphone amp, and of course very low self noise. The microphone offers a switchable high pass filter and comes complete with a 5m USB cable. Optional extras include a shock mounting system and soon to be released Anglepoise style table mount arm.

It's a must for any musician on the road or in the project studio, but the Podcaster is going to offer solutions to more than just musicians. The mic opens up possibilities for anyone who records audio—from podcasters, journalists and students to business people adding audio files to websites and multimedia presentations.

Create your own radio show, or let us do it for you, as we have even developed a website to host and broadcast podcasts for RØDE Podcaster customers.
